 Examiner's signature, if required

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Dr. John Stone explained the invention as being directed to the analyzation of fragments whithin interphase nuclei. Dr. Stone, when asked, stated that the inventive nature of the claims was not directed to "diseases for which chromosome damage is diagnostic" nor new "chromosome damaging agents". Thus, the inventive nature of the claims is to the analysis in interphase cells. An amendment directed to this feature was proposed. Furthermore, the 112/2nd issue regarding the preamble meeting the final process step was discussed. Examiner Arthur explained that the claim does not make sense as written. For example, the method does not compare the fragments to a normal to determine the increase fragmentation. The attorney expressed the concern of limiting, however, the exminer explained the method is not complete without such a step. As a result of the interview, the examiner agreed to entertain a supplemental amendment provided the amendment was faxed on Monday, November 13, 2000.
